LIFTS

SWEDISH QUALITY & DESIGN SINCE 1898

## THIS IS KALEA SILK

The story of Kalea Lifts begins in Sweden, more than a century ago.

Today, we are one of the oldest lift brands in the world and we are stronger than ever.

### ► NO MACHINE ROOM

With only 2250 mm required in overhead, a Kalea Silk requires almost no headroom!

### ► NO PIT

Thanks to its innovative screw-driven technology, the Kalea Silk requires only 50 mm pit, or 0 mm with a 50 mm ramp!

### ► SUPERIOR SAFETY

Fully EN81-41 compliant, and thanks to its screw-drive that cannot "fall down", the Silk is one of the safest lifts on the market

### ► ECOSILENT 1.5

With great technology comes great responsibility - and the Silk punches way above its weight when it comes to technology. Equipped with EcoSilent 1.5, it is silent, eco-friendly and requires minimal maintenance.

### ► ANTI-STUCK SYSTEM

Battery back up, reset button on door, phone and emergency openings – we have you covered even if the worst were to happen!

## KALEA SILK

The newest generation of entry-level lifts from Kalea, the Silk combines top-notch EcoSilent technology with intuitive design and attention to detail

### TECHNICAL DETAILS

|                         |                                                                                                                        |
|-------------------------|------------------------------------------------------------------------------------------------------------------------|
| <b>DRIVE SYSTEM</b>     | EcoSilent, Gen. 3 Screwdrive                                                                                           |
| <b>SPEED</b>            | 0.15 m/s                                                                                                               |
| <b>DOOR TYPE</b>        | Swing Door, Glass, Manual                                                                                              |
| <b>CEILING</b>          | Mirror Ceiling                                                                                                         |
| <b>GLASS PANELS</b>     | 1000 mm height                                                                                                         |
| <b>METAL PANELS</b>     | Aluminum Composite Panels                                                                                              |
| <b>CALL BUTTON</b>      | Mechanical                                                                                                             |
| <b>LOCKING SYSTEM</b>   | Cental locking from call button                                                                                        |
| <b>STANDARD</b>         | EN 81-41                                                                                                               |
| <b>LOAD</b>             | 400 kg                                                                                                                 |
| <b>PLATFORM HEIGHT</b>  | 1300 mm                                                                                                                |
| <b>COLOR</b>            | Gothic Graphite Black                                                                                                  |
| <b>MAX TRAVEL</b>       | 20,000 mm                                                                                                              |
| <b>OVERHEAD</b>         | 2330 mm                                                                                                                |
| <b>PIT</b>              | 50 mm (or 0 mm with ramp)                                                                                              |
| <b>VOLTAGE</b>          | 1 phase / 3 phase                                                                                                      |
| <b>DOOR HEIGHT</b>      | 2100 (blade) / 2330 (frame)                                                                                            |
